## Winter Solstice

Friday December 21<sup>st</sup>. The winter solstice occurs exactly when the axial tilt of a planet is farthest away from its star, depending on the polar hemisphere of reference. Earth's maximum axial tilt to our Sun during a solstice is 23° 26'. More evidently from high latitudes, a hemisphere's winter solstice occurs on the shortest day and longest night of the year, when the sun's daily maximum position in the sky is the lowest. Since the winter solstice lasts only a moment in time, other terms are often used for the day on which it occurs, such as midwinter, the longest night or the first day of winter.

Saturday December 15<sup>th</sup> from 4:00 pm until 9:00 pm. Evergreen Brick Works presents: **Winter Solstice Festival**. The Winter Solstice is very special – it's the year's longest night and the shortest day. Come down to the valley and play with us into the night as we celebrate the coming solstice. Lace up as we launch the winter season with the opening of our family friendly outdoor skating rink, groove to some hot tunes and chill by the warm fire. Plus join Native Child and Family Services of Toronto in partnership with Evergreen for the Traditional Winter Round Dance. This event is located at 550 Bayview Avenue, Toronto.
